EXAMINER

SCHNEIDER, JOSHUA D

ART UNIT PAPER NUMBER

2182

DATE MAILED: 11/02/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

*Supplemental*  
**Office Action Summary**

Application No.

10/814,561

Applicant(s)

CHOU, YU-SHENG

Examiner

Joshua D. Schneider

Art Unit

2182

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 2 and 4-9 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 2 and 4-9 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_.

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 9/22/2006 have been fully considered but they are not persuasive.
2. Applicant had responded with several pages of arguments that detail the inner workings of HDDs and the development of duplicator systems. However, none of these arguments address the rejection set forth or limitations in the claims. Applicant refers specifically to the signals DSTOBE, DD, and HSTROBE, as signals that the prior art systems are not capable of handling. None of these signals is found in the claims or in the specification. Applicant also points to other differences between the prior art and current technologies, but again make no references to the claims, the rejection, and what differences exist between them to support the claim of traversal. The arguments are not persuasive.
3. This rejection is given to correct the incorrect listing of the claims of the previous rejection.

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 4-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,131,141 to Ravid in further view of U.S. Patent 6,556,769 to Akahane et al., U.S. Patent 5,237,466 to Glaser et al., and Logic and Computer Design Fundamentals by Mano and Kime.

Art Unit: 2182

6. With regards to claim 2, Ravid teaches a data source (Fig. 1, element 20 or 100), a plurality of target drives (Fig. 1, elements 110), wherein the data of said source recording medium are transmitted to a plurality of said target recording medium (column 5, line 35, through column 6, line 38). Ravid fails to teach that the target drives have a recording medium, a FIFO and a DMAC. Akahane teaches a drive block that includes hard disks as a recording medium, a DMA controller, and a FIFO memory (Fig. 4, elements 40-43, column 7, lines 57-64). It would have been obvious to one of ordinary skill in the art at the time of invention to use the HDD block of Akahane for the drives of Ravid in order to more efficiently effectuate data transfers by transferring data by DMA without processor intervention. The use of the HDD blocks of Akahane with as the source and target drives duplication system of Ravid would teach a data source; a plurality of target FIFO buffers; a plurality of target DMACS, and a plurality of target recording mediums; and wherein the data of said source recording medium are transmitted to said source FIFO buffer through said source DMAC; the data of said source FIFO buffer are transmitted to a plurality of said target FIFO buffers and the data of said target FIFO buffer are transmitted to said target recording medium through said target DMAC. The combination of Ravid and Akahane does not teach a multiplexer or routing signals through a multiplexer. However, Ravid does teach the use of switches and a controller (Fig. 1, elements 40, 50, 60, 70, and 80) to control access to the bus. Multiplexers were notoriously well known in the art at the time of invention in order to select from a plurality of signals. Ravid teaches that signal can be coming from a PC connected through the parallel port or the source drive (Figs. 1 and 2, column 5, line 35, through column 6, line 64). Glaser teaches that it was well known in the art to use multiplexers to select a single source from a plurality of sources (Fig. 1, elements 25-28). Mano

Art Unit: 2182

and Kime also teach that multiplexers were well known in the art to be used to select a source signal from a plurality of source signals (see page 119). It would have been obvious to one of ordinary skill in the art at the time of invention to use the multiplexers of Glaser or Mano and Kime with the duplication system of Ravid and Akahane in order to select one of many inputs and steer it to the output line.

7. With regards to claim 4, Ravid teaches plurality of comparators (Fig. 1, element 90), wherein the data of the data source are transmitted to said source FIFO buffer through said source DMAC; the data of said target recording medium are transmitted to said target FIFO buffer through said target DMAC; and the data source to said comparators through said multiplexer and compared with the data of target FIFO buffer by said comparators (column 5, line 35, through column 6, line 38, especially column 6, lines 22-29).

8. With regards to claims 5-9, Applicant's numerous definitions of a "recording medium" (claims 5-9) is construed to be an admission that the criticality does not reside in the type of "recording medium" utilized and hence obvious variations of one another.

9. With further regards to claims 5 and 9, Ravid teaches wherein said recording medium is a hard disc that is a memory.

10. With regards to claims 6, 7, and 8, Ravid teaches that other type of recording mediums such as an optical disc, a rewritable optical disc, and a floppy disc, are notoriously well known in the art (column 1, line 39, through column 3, line 8). The rewritable optical disc is not explicitly taught but it notoriously well known in the art to be an alternate way of storing data.

11. With regards to claim 10, Ravid does not teach, but Akahane does teach a transferring interface provided between said source recording medium and said source DMAC (Fig. 4,

Art Unit: 2182

elements 40-43, column 7, lines 57-64). It would have been obvious to one of ordinary skill in the art at the time of invention to use the HDD block of Akahane for the drives of Ravid in order to more efficiently effectuate data transfers by transferring data by DMA without processor intervention.

12. With regards to claim 11, Ravid teaches a transferring interface being a SCSI control interface by the incorporation by reference of U.S. Patent 5,235,683 to Dahlerud.

***Conclusion***

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

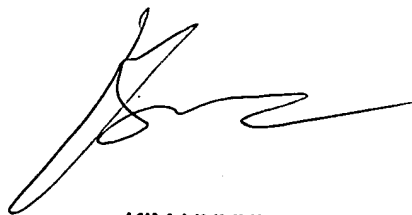

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua D. Schneider whose telephone number is (571) 272-4158. The examiner can normally be reached on M-F, 8-4:30.

Art Unit: 2182

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571) 272-4147. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
